第 35~38 題為題組

Colors make our world bright and beautiful. Every day we see many colors in nature, in clothes, and in the things around us. But what do you know about colors?

The primary colors are red, blue, and yellow. These are special because they cannot be made by mixing other colors. When we mix two primary colors, we get secondary colors. For example, red and yellow make orange, blue and yellow make green, and red and blue make purple.

When a primary color and a secondary color are mixed, we get intermediate colors like red-orange, blue-green, or yellow-green. These colors make the world even more colorful.

There are also neutral colors — black, white, and gray. They are not part of the color wheel, but they help other colors look brighter or softer.

Colors are everywhere and make life more exciting. Imagine a world without colors—it would be dull and boring!

35. What do we get when we mix two primary colors?
(A) dark colors (B) secondary colors (C) neutral colors (D) new primary colors
36. Which of the following is a secondary color?
(A) blue (B) white (C) green (D) black
37. What are neutral colors?
(A) Colors that are very bright.
(B) Colors that cannot be seen.
(C) Black, white, and gray
(D) Red, blue, and yellow
38. Which of the following is NOT true?
(A) Black and white are neutral colors.
(B) Orange is one of the secondary colors.
(C) If you mix red and orange, you will get one intermediate color.
(D) Black can be made by mixing two primary colors.

第39~40題為題組
